

AJ CHEMICAL 339

A Series Of Cold Flow Improvers

Diesel-Antigel fuel additives are available in a variety of concentrations to permit usage at ratios from 1: 1,000 through 1: 10,000.

Diesel-Antigel serves as a simple, effective and economical means of directly improving upon the limitations of any premixed winterized product. **Diesel-Antigel** is a super-concentrated composition of proven highly fuel enhancers that work together to effectively provide these critical functions:

- ◆ Yielding cold flow properties typical of at least 30% kerosene blend
- ◆ Lowering pour point and cold filter plugging point
- ◆ Reducing icing tendency by controlling condensation and water buildup
- ◆ Extending cold flow operability by stopping the growth and congealment of wax crystals
- ◆ Adds lubricity, fuel stability, cetane, and improves fuel economy
